AutoCAD Inventor - Solid Modeling, Stress and Dynamic Analysis

Instructor: John R. Andrew, P.E.

2020

PDH Online | PDH Center

5272 Meadow Estates Drive Fairfax, VA 22030-6658 Phone: 703-988-0088 www.PDHonline.com

An Approved Continuing Education Provider

1. TYPICAL PARTS, ASSEMBLIES & DRAWINGS

The examples below are typical: parts, assemblies, and drawings created with AutoCAD, "Inventor".

1.1 A typical 3D solid modeled Inventor Part above.

1.2 Above a 3D solid modeled Inventor Assembly composed of many 3D solid modeled parts.

1.3 Multi-view dimensioned part drawing above.

2. FINITE ELEMENT STRESS ANALYSIS

2.1 Finite element stress analysis above of a solid modeled Inventor part is very fast and convenient.

The "Stress Analysis" toolbar menu above is describer below.

2.2 EXAMPLE: STRESS ANALYSIS REPORT

Analysis of PLATE-1

Geometry and Mesh

The Relevance setting listed below controlled the fineness of the mesh used in this analysis. For reference, a setting of -100 produces a coarse mesh, fast solutions and results that may include significant uncertainty. A setting of +100 generates a fine mesh, longer solution times and the least uncertainty in results. Zero is the default Relevance setting.

www.PDHonline.org

TABLE 1 PL ATE-1 int Statist	tics
Bounding Box Dimensions	3.0 in 1.0 in 0.375 in
Part Mass	0.2965 lbm
Part Volume	1.042 in ³
Mesh Relevance Setting	0
Nodes	2171
Elements	363

Bounding box dimensions represent lengths in

the global X, Y and Z directions.

Material Data

The following material behavior assumptions apply to this analysis:

- Linear stress is directly proportional to strain.
- Constant all properties temperature-independent.
- Homogeneous properties do not change throughout the volume of the part.
- Isotropic material properties are identical in all directions.

TABLE 2

Carbon	Steel
--------	-------

Young's Modulus	2.901e+007 psi
Poisson's Ratio	0.29
Mass Density	0.2846 lbm/in ³
Tensile Yield Strength	5.076e+004 psi
Tensile Ultimate Strength	6.092e+004 psi

Results

The table below lists all structural results generated by the analysis. The following section provides figures showing each result contoured over the surface of the part.

Safety factor was calculated by using the maximum equivalent stress failure theory for ductile materials. The stress limit was specified by the tensile yield strength of the material.

T Struct	ABLE 5 ural Results	
Name	Minimum	Maximum
Equivalent Stress	410.1 psi	9.956e+004 psi
Maximum Principal Stress	-6589 psi	1.05e+005 psi
Minimum Principal Stress	-4.601e+004 psi	1.606e+004 psi
Deformation	0.0 in	2.689e-003 in
Safety Factor	0.5099	N/A

2.3 STRESS ANALYSIS EXAMPLE-1

© John R. Andrew

2.4 A steel bar with a hole is modeled above.

2.5 Drop down menu: Applications > Stress Analysis is selected.

2.6 The "Choose Material" dialog box opens next and Carbon Steel is selected.

PDH Course G237

www.PDHonline.org

2. 7 Selections are made from the "Stress Analysis" toolbar.

<u>www.PDHcenter.com</u>	PDH Course G237	www.PDHonline.org
Force Magn 100 P	Location tude 10.00 lbforce OK Cancel >>	

2.8 The force "Location" is picked with the mouse pointer on the left end of the bar and a uniformly distributed load is applied on the shaded end surface.

	Bearing Load		1
	Faces [Direction	
	Magnitude 10000.00 lbforce		
	ОК	Cancel >>	
1			

2.9 The 10,000 lb force is applied to the hole, "Face" with the mouse pointer at the right end of the bar.

2.10 "Pin Constraint" is "Fix Axial direction".

2.11 The bar is divided into finite elements above and a stress and deflection analysis is performed automatically.

2.12 After evaluating the stress analysis the fineness of the grid can be adjusted to improve accuracy.

2.13 "Stress Report" icon is selected from the, "Stress Analysis Toolbar".

Stress Report Icon on the "Stress Analysis Toolbar"

PDH Course G237

www.PDHonline.org

2.14 The stress analysis panel bar is shown above.

A report is created in an HTML format.

Use the Microsoft Internet Explorer options to save or print the report, as needed.

Part Features Toolba fx 🚫 🎦 🚺 🗳 🗿 🗞 6 Gr Tube & Pipe Component Connector Structural Shape

3. PIPING AND STRUCTURES

3.1 Click on the, "Tube & Pipe" icon on the "Part Features" toolbar above to create the pipe run below.

Page 13 of 175

3.2 Populate the piping route above by selecting: Browser > Edit > Select the nested route (Blue Lines) > Click the "Populate Route Tool" > The piping below will be created automatically conforming to the current piping specification.

3.3 "Pipe Run" example.

3.4 BEAMS AND PLATE CALCULATOR

3.5 Click on the "Beam & Column Calculator" icon on the "Design Accelerator Toolbar" above to open the "Beam and Column Calculator" dialog box below.

PDH Course G237

www.PDHonline.org

Page 47 of 175

6. DESIGN ACCELERATOR

6.1 Please read the list of Inventor engineered items that can be created or calculated with the, "Design Accelerator" toolbar above.

6.2 This toolbar is very user friendly and includes engineering and design of the most common machine components and an, "Engineers Handbook".

7. ENGINEER'S HANDBOOK

7.1 A comprehensive, "Engineer's Handbook" is included in Inventor's Design Accelerator toolbar:

- 1. Joints
- 2. Shaft Generator
- 3. Bearings
- 4. Spring Generators
- 5. Transmission Mechanisms
- 6. Beam and Column Calculator
- 7. Tolerance Calculator
- 8. Plate Calculators

7.2 Example from the Engineer's Handbook – Joints - Welded

"Normal Stress" in Butt end weld loaded with bending in the plane perpendicular to the

plane of welded parts is one of many engineering calculations and formulas in Inventor's "Engineers Handbook".

(22230355)

Normal stress

$$\sigma_3 = \frac{u \cdot M_2}{W}$$
 [MPa,psi]

where:

u constant

- for calculation in metric units u = 1000

- for calculation in English units u = 12

M2 bending moment [Nm, lb ft]

W section modulus of throat area of the weld [mm³, in³]

Reference stress

$$\sigma_5 = \frac{\sigma_3}{\alpha_1}$$
 [MPa, psi]

where:

- σ₃ normal stress [MPa, psi]
- α₁ factor of the weld joint [-]

8. ASSEMBLY

Basic Inventor assembly procedures are described with illustrations.

4		
1.191		

10.8 Double click with mouse pointer, the 2.0405009 inch dimension to be edited.

10.9 Type 4 to replace the 2.041 inches.

10.10 Both horizontal 4.000 and vertical 3.000 dimensions have been edited.

PDH Course G237

www.PDHonline.org

10.11 Pick, "Show Constraints" on the "2D Sketch Panel" shown above and pick the lines that have been sketched.

10.12 Base Line, parallel, and perpendicular constrain icons above indicate constraint types.

10.13 Pick "x" to close each constrain icon.

10.14 Right click and select, "Done".

10.15 Right click and select, "Finish Sketch".

10.16 The f5 key gives the 2D finished sketch view.

10.17 The f6 key gives the 3D isometric view.

10.19 Pick the "Profile" shape to be extruded in the, "Extrude" dialog box above.

10.20 Edit the "Distance" to read .500 in to be extruded.

10.21 Pick "OK".

10.22 The complete part file above may be saved.

11. SAVING A PART FILE

11.1 Pick drop-down menu, "File" > Save As > "COVER PLATE".

Save As						5

Quick Launch						

11.3 Open the Inventor Part drawing by selecting: File > Open.

- 11.4 Pick the new sketch surface (turquoise) above.
- 11.5 Right click and pick "New Sketch".

- 11.6 A sketch plane has been added.
- 12. ROUND HOLES METHOD-1

12.1 Pick "Center Point Circle".

- 12.2 Pick Circle-1 center point approximate location at top left as shown above.
- 12.3 Release mouse button and drag circle to approximate diameter.
- 12.4 Pick circumference with mouse button to set Circle-1 size temporarily.
- 12.5 Place mouse pointer over Circle-1 center point.
- 12.6 Move mouse pointer to the approximate Circle-2 center at top right above.

Note: Both circles do not have to be on the same center line. Hole size and location dimensions will be edited later.

- 12.7 Pick Circle-2 center on center line between circles.
- 12.8 Move mouse pointer vertically up to "Tangent Line".
- 12.9 Pick circumference with mouse button to set Circle-2 size temporarily.

12.10 Pick the, "Center Point Circle" icon on the 2D Sketch Panel and sketch bottom the right Circle-3.

12.11 Sketch 4th circle as illustrated above.

12.12 Select "Auto Dimension" shown above.

© John R. Andrew

12.13 Edit each dimension by double clicking.

12.14 After dimensions have been edited, right click and select "Finish Sketch".

12.15 Press f6 key for isometric view of the finished sketch above.

12.16 Select "Hole".

www.PDHonline.org

- 12.17 Edit diameter to value to read 0.500 in as shown above.
- 12.18 Select "Through All".

12.19 Select the "Centers" and "From Sketch" tabs and pick each hole center point. 12.20 Pick "OK".

12.21 Finished part with round through holes.

13. ROUND HOLES METHOD-2

- 13.1 Create a new rectangular plate with no holes by following the steps above.
- 13.2 Select "Hole".

www.PDHcenter.com

www.PDHonline.org

- 13.3 Select 1 "Linear".
- 13.4 Edit hole diameter to 0.500 in.
- 13.5 Select 2 "Face" and pick approximate hole location.

13.6 Pick left edge of plate as dimension "Reference 1" and the .911 inch dimension will appear as shown below.

13.7 Edit reference dimension d4 (.911) to read 0.500 in as above.

- 13.8 Pick the top edge of the plate as "Reference 2".
- 13.9 Edit Reference Dimension 2 to read .500.
- 13.10 Select, "Though All" and pick "Done".

13.11 Completed part with four .500 dia. Through holes each placed by Method 2 described above.

14. CIRCULAR HUB

Open AutoCAD "Inventor" 2008, 2009 or 2010.

Page 118 of 175

PDH Course G237

www.PDHonline.org

Pres Esc key to stop sketching.

16.13 On the "2D Sketch Panel" select "Auto Dimension".

16.14 Press "Apply" and "Done".

16.15 Double click on any dimension (d0 = 251.605 in the example above).

16.16 Edit the dimensions 114 mm and 67 mm as shown above.

PDH Course G237

www.PDHonline.org

16.17 Pick "Center Point Circle".

© John R. Andrew

Page 121 of 175

16.18 Pick the circle center point 1 above > Release mouse pointer > drag up to radius point 2 > press left mouse button > move pointer to center 1 > do not press mouse button > drag right to point 3.

16.19 Pick point 3 > release mouse button > drag pointer to 4 > notice construction tangent line 2 to 4 > pick point 4.

16.20 Pick "Line" on the 2D Sketch Panel shown above.

16.21 Pick "Line" on the 2D Sketch Panel shown above and sketch the line 2 to 4.

16.22 Sketch the two circle tangent lines 1 and 2 above which may or may not be horizontal lines.

16.23a Pick "Auto Dimension" on the 2D Sketch Panel or type D and add the dimensions above one by one manually.

Page 124 of 175

16.23b Pick the drop down menu arrow on the, "Perpendicular" constraint icon in the above 2D Sketch panel.

16.23c Add horizontal constrains to the above upper and lower horizontal lines if they are not horizontal.

16.24a Right click and select, "Done" when the sketch is complete.

16.24b Sizes of shapes can be altered by editing dimensions later if desired.

16.25 Right click and select, "Finish Sketch" as shown above.

16.26 The function key f5 gives the 2D view above.

16.27 The function key f6 gives the 3D isometric view.

16.28 Pick "Extrude" in the Extrude Features menu.

16.29 Edit, "Distance" to 16 mm (1).

16.30 Pick the, "Profile" tab in the, "Extrude" dialog box (2).

16.31a Pick the profile to be extruded (3) and it will turn red.

16.31b If the oblong shape had been selected, it would turn red and be extruded.

16.32 Click, "OK" to finish the extrusion.

16.33 Pick drop down menu "File" > Save As > HATAL.

16.34 Browse for a folder to save the part file in.

16.35 Right click on the front surface and select "New Sketch".

16.36 Pick "Two Point Rectangle" in the 2D Sketch Panel.

- 16.37 Pick point 1 and release the mouse button.
- 16.38 Drag the rectangle to point 2 and press the mouse button.

16.39 Pick "Offset" in the 2D Sketch Panel or type O.

16.40 Edit "Offset" to the new value 9.5 mm.

16.41 Right click and select "Done".

16.42 Right click and select "Finish".

16.43 The sketch is finished above.

16.44 Pick "Extrude" or type E.

© John R. Andrew

16.45 Edit "Distance" to 32 mm and pick the red profile.

16.46 Pick "OK" to finish the extrusion.

16.47 The finished part with extrusion is shown above.

- 16.48 Right click on the rectangular surface and start a new sketch.
- 16.49 Sketch the two point rectangle shown above.

16.50 Extrude the red area a distance of 32 mm.

16.51 The part with extrusion is shown above.

16.52Pick "Move Face".

- 16.53 Pick the green face (1).
- 16.54 Select the forward "Direction" shown above (2).
- 16.55 Edit distance to 16 mm (3).
- 16.56 Select, Apply (4).
- 16.57 Select, "OK" (5) to complete the, "Move Face" extrusion.

16.58 The finished part is shown above.

16.59 Select, "Hole" or type: H > Enter.

www.PDHonline.org

16.60. Complete steps 1 through 7 illustrated in the above "Hole" dialog box.

- 16.61 Save the finished part above.
- **17. MULTI-VIEW DRAWING**
- 17.1 When Inventor is launched the, "Open" dialog box below will open.
- 17.2 If Inventor is already launched select: File > Open, to open the dialog box below.

Completed Drawing

17.42 The completed drawing with 3 orthographic dimensioned views and one isometric view is shown above.

17.43 If the above drawing was printed on a "C" size sheet of paper the text and dimensions would be 1/8 inch high, the industry standard.

18. INVENTOR: MENUS, TOOLBARS, & PANELS

The Inventor menus listed below are included in this course.

- A. New File
- B. Format
- C. 2D Sketch Panel
- D. Part features Toolbar
- E. Design Accelerator toolbar
- F. Stress Analysis toolbar

- G. Dynamic Simulation toolbar
- H. Assembly Panel
- I. Drawing Views Panel

A. New File

Start a new: Part, Assembly, Drawing, Weldment, Sheet Metal Part, Standard iPart, etc with the "New File" dialog box below. Libraries of "iParts" are available in the Inventor online, "Content Center" library.

New F	ile					X
Default	English	Metric				
		PWG	1AM		IPN	
Sheet	Metal.ipt	Standard.dwg	Standard.iam	Standard.idw	Standard.ipn
